HALFMARBLE

“When you are racing against your own biology: *story is just the exhaust* the science is the engine and our time is the fuel”

GERARD ZIEMSKI // HALFMARBLE COFOUNDER // BIO PLATFORM ARCHITECT

"The only tools we have to manage our own slice of PD hell."

I am not building for a market. I am building for a race. Whether it's hardware to stabilize a trembling hand or software to track the science behind cellular repair — these are the mechanics of survival.

SYSTEM // 01 // HARDWARE

SteadyHandTool

A high-stability SMD soldering aid designed to dampen tremors. Born from the need to keep tinkering when biology tries to stop it. Open-source because community is the only way forward.

- CERN-OHL-S-2.0 (OPEN SOURCE)

SYSTEM // 02 // SOFTWARE

SteadyDoseTracker

A pharmacokinetic visualizer that models the blood concentration curves of the medication schedule your doctor prescribed. Half-life math shows how your levels rise and fall in real-time — not to tell you what to take, but to help you and your clinician see what is

- HIGH-MASS VIBRATION DAMPENING
- BUILT FOR PRECISION PCB WORK

COMING SOON TO CROWD SUPPLY

SEE THE HARDWARE

already happening. The Bridge: PK validates what you can feel (ON/OFF states), building trust for the autophagy states you can't.

- BATEMAN PHARMACOKINETIC MODEL
- FASTING-AWARE ABSORPTION
- REAL-WORLD EVIDENCE CAPTURE
- GLASS BOX SOURCE TRACING
- MENTAL STATE & MOOD TRACKING
- OBJECTIVE MOTOR TESTING
- FOCAL SYMPTOM LOGGING
- GLUCOSE / KETONE CORRELATION
- CALENDAR → MOTOR DEMAND PREDICTION

SEE THE ENGINE

SteadyFastingTracl

A technical solution for a biological war. This isn't a lifestyle app; it's a specialized fasting engine grounded in the latest autophagy research. The science is the engine — we just built the dashboard.

- AI-DRIVEN STATE ESTIMATION
- NEURO-PROTECTIVE PROTOCOLS
- THERAPEUTIC CARBOHYDRATE RESTRICTION (TCR) PROTOCOLS
- GLASS BOX SOURCE TRACING

- GLASS BOX SOURCE TRACING
- MENTAL STATE & COGNITIVE CLARITY
- GKI & METABOLIC TRACKING
- SAFETY CIRCLE PROTOCOLS — HUMAN-IN-THE-LOOP ESCALATION

SEE THE ENGINE

SteadyFuelTracker

A specialized metabolic intake engine built on the Therapeutic Carbohydrate Restriction (TCR) guidelines championed by the Public Health Collaboration UK. This is not a diet app. It is a precise

macro-nutrient tracker designed to help patients induce the therapeutic nutritional ketosis required to fuel a neuro-compromised brain, while monitoring protein timing to prevent levodopa interference at the blood-brain barrier.

- TCR PROTOCOL ALIGNMENT (PHC UK)
- LEVODOPA / PROTEIN INTERFERENCE LOGGING
- GLUCOSE & KETONE (GKI) SYNCING
- MACRO-TO-MOTOR STATE

CORRELATION

IN DEVELOPMENT

TARGET // JUNE 2026 // CLINICAL DEPLOYMENT

Patients 2026 Conference →

HARVARD MEDICAL SCHOOL / BETH ISRAEL DEACONESS MEDICAL CENTER // BOSTON

halfmarble is officially registered for the DCI Network's Patients 2026 Conference in Boston. We are bringing our "Glass Box" architecture to the clinical informatics community to demonstrate how patient-engineered PK visualizations can safely capture the *"Messy Middle"* of Real-World Evidence (RWE) that researchers need, with zero AI drift.

WHAT WE ARE DEMONSTRATING

- **SteadyDoseTracker** — pharmacokinetic visualizer with Bateman modeling, continuous pump infusion support, BBB protein-competition modeling, and calendar-driven motor demand prediction
- **SteadyFastingTracker** — autophagy and fasting engine with biomarker timelines, tiered safety protocols, and an on-device AI grounded in the Foundational 60 research corpus
- **SteadyFuelTracker** [IN DEVELOPMENT] — architecture review: clinical feedback on TCR protocol alignment for PD metabolic management
- **Glass Box Architecture** — every parameter traces to a published source, every data field is documented, every "we will never" is legally codified. No black-box AI. No hallucinations. No drift.
- **SteadyHandTool** — open-source hardware for tremor compensation in fine-motor work (coming soon to Crowd Supply)

WHAT WE ARE SEEKING

- → Research partners interested in PD real-world evidence at the intersection of PK modeling, fasting, and metabolic state
- → Clinical feedback on our PK model accuracy from movement disorder specialists and PD neurologists
- → IRB pathway guidance for our opt-in anonymized data sharing model (k-anonymity k≥50, differential privacy ε=1.0)
- → Early-adopter clinicians willing to pilot the tools with their PD patients

halfmarble was not built by a health tech company. It was built by a patient and a nurse — because the tools we needed did not exist. We are coming to Patients 2026 to find out if the clinical community wants what we have built.

GLASS BOX // DATA TRANSPARENCY

Every field we capture. Every transformation we apply. Every *"we will never."* Documented, public, plain language.

THE "WE" IN "WE NEED THIS"

Gerard Ziemski

COFOUNDER // BIO PLATFORM ARCHITECT

Anya Ziemski

COFOUNDER // PATIENT CARE ARCHITECT

"My wife and I are building this because I have Parkinson's Disease. Halfmarble is not a startup. It's a fight."

A NURSE AND A PROGRAMMER. WE BUILT THIS. JUST US.

GIVING BACK // 5% OF NET PROFITS

Halfmarble donates **5% of net profits** to the organizations whose research our tools stand on. Not charity in the abstract — reinvestment in the intellectual commons we depend on.

2.5%

Michael J. Fox Foundation

The largest non-governmental funder of Parkinson's research in the world. They fund the science halfmarble learns from.

2.5%

Public Health Collaboration UK

The low-carb, real-food metabolic health community that informed halfmarble's approach to fasting, keto, and meal timing.

Scales to 10% (5% each) automatically once halfmarble reports $250,000 in annual net profit. Permanent from that point forward.

ANNUAL DONATIONS PUBLISHED. LEGALLY CODIFIED. NON-NEGOTIABLE.
